### How does it work?

A CQL clause is a combination of an index, a relation and search terms.  
e.g. title any physics  
In this clause "title" is the index, "any" the relation and "physics" the search term.

### Some examples

Search for "dna" and "loci" in the title:  
title all "dna loci"

Search for items published between 2013 and 2015:  
year >= 2013 and year <= 2015

Search for items by researchers affiliated with GE17 or D104:
